Prince Kukreja

Design Engineer · Product UI

London, UK · +44 7424 325731 · contact@pixelprince.dev · pixelprince.dev · linkedin.com/in/princekukreja · github.com/princek64

ABOUT

I design and build product UI, usually by turning complex workflows into clearer decisions on screen. I then carry those decisions into the real interface, including components, states and interactions.

EXPERIENCE

GetSociable · Design Engineer · London, UK — Jul 2026 – Oct 2026

Consumer mobile app for discovering events and making plans with friends. Contract.

- Worked on key product flows across onboarding, home, discovery, search and planning, from early concepts through implementation, with accessibility considered throughout.
- Turned user research into product changes, including separating Listings from Plans and simplifying the create-plan flow.
- Designed and prototyped flows in code using AI tools, with a design console, live phone preview and decision controls for reviews. This helped the team test ideas and move much faster.

SPARK Business Works · Frontend Engineer · Remote — Aug 2020 – Apr 2026

Software agency building client products.

- Owned frontend delivery across multiple client products, including UI decisions, code reviews and releases. Mentored and onboarded junior developers.

CCPower Fleet Management · Vue 3, Quasar, Pinia, TypeScript, Directus · 2025 – 2026

- Designed separate desktop and mobile experiences where the workflows were different. Desktop used large tables and filters; mobile used simpler task-focused cards for field crews.
- Turned the Figma design system into reusable Quasar components, theme styles and tokens used across the product.
- Built pre-trip inspection, repair-order and equipment-cost flows, including the frontend, API integration and tests.

Legal Operations Tool · React, TypeScript, Material UI · 2025

- Designed and built a document workflow used by around 340 legal staff, with an estimated saving of 3 to 5 hours per person each week.
- Observed how the legal team worked, then used prototypes and feedback to shape the product around that workflow.

Receiving Module · Angular, TypeScript, Playwright · 2024 – 2025

- Reworked the purchase-order flow for around 1,000 internal users to reduce repetitive data entry, and added Playwright tests around the main journeys.

Domain Registrar Portal · Nuxt.js, Tailwind CSS · 2022 – 2024

- Designed and built the shared UI components used across the portal, including buttons, forms, modals and tables.
- Helped rebuild 15+ screens from the older Handlebars and Bootstrap interface in Nuxt, cleaning up inconsistent patterns along the way.

CovidIndia.org · Volunteer Web Developer · Remote — Feb 2020 – Jul 2020

Community-led COVID-19 information platform, built alongside my role at Scientific Animations.

- Designed and built national, state and district views for a real-time public platform used by thousands of people across India and covered by national media.
- Used Highcharts to make the COVID data easier to scan across national, state and district views. Engagement increased by approximately 40%.

Scientific Animations · Frontend Developer · Gurgaon, India Aug 2019 – Jun 2020

- Designed and built interactive colour-theory tools for children across iPad and web, along with an internal React CMS for the content team.

PERSONAL & RESEARCH PROJECTS

Generative UI Research Prototype · React, Vite, TypeScript · Birkbeck

- Designed and built three versions of a flight-search interface: dashboard, conversational and generative UI, with an LLM reading user intent and choosing the layout.
- Built the prototypes in React and tested them with nine participants to compare usability, trust and user control.

Ichie · Next.js, TypeScript, Supabase, Tailwind CSS

- Personal networking CRM designed and built end to end, with a focus on quick capture after meeting someone. ichie-web.vercel.app

SKILLS

Design: Figma, product design, interaction design, design systems, design tokens, component libraries, prototyping, accessibility (WCAG 2.2 AA)

Research: User interviews, usability testing, UX audits, information architecture

Frontend: TypeScript, JavaScript, React, Next.js, Vue, CSS, Tailwind CSS, Storybook

AI and prototyping: Claude Code, Cursor, generative UI, design-to-code workflows

Testing and APIs: Playwright, Vitest, REST APIs, Git

VOLUNTEERING

Scottish Tech Army · Project Manager · Marmalade Trust 2026 – Present

- Running delivery for a charity product tackling loneliness, coordinating the client, designer and developers while contributing across product design and implementation decisions.

EDUCATION

MA Digital Media Design · Birkbeck, University of London Sep 2025 – Sep 2026

- Dissertation compares dashboard, conversational and generative UI as interface paradigms for AI products, evaluated through a build-and-test study.

BTech Computer Science and Engineering · UPES, India 2014 – 2018
